**SPECIAL OFFER FOR RETROFITTING A NEW DYNA-TROL CONTROL
ONTO AN OLD "B" MODEL PROGRAMMATIC KILN WITH A BROKEN OR
MALFUNCTIONING PERFECTFIRE CONTROL**

If you have an L&L "B" Model kiln of any age that has a PerfectFire control that no longer works we are making the following offer. This covers kilns that are out of warranty.

A conversion kit is available which will include a new Dyna-Trol programmable control. This is a much more sophisticated control than the PerfectFire control and is more reliable. It is based on the proven Bartlett THP-600-8 control with an upgraded user interface and software. The underlying control has been around for many years now. We have had very few failures of the THP control over the years we have used it.

The kit includes the Dyna-Trol control, 24 volt transformer , new terminal ends and a wiring diagram and instructions for making the conversion.

The price of the conversion kit is \$350. Parts are normally in stock. This is a discount over the cost of a new control and transformer. The alternative is to send your PerfectFire to Canadian Instruments for repair. Expect this to cost at least \$100 and take 4 to 6 weeks.

Canadian Instrumentation Company
Milton, ONT L9T 2Y3
1-800-263-5225, FAX: 905-332-4270

The conversion can be done fairly easily in the field. At your option you may send us your control panel and we will do the conversion. The cost for this is \$50 in addition to the cost of the kit.
